LANGUAGES

- Mandarin and Cantonese: Native
- English: Fluent

TECHNICAL SKILLS

- Python, SQL, R, Java
- MySQL, NoSQL
- PyTorch, Scikit-learn
- LightGBM, Data Mining, NLP
- Recommender Systems, Q-Learning
- RAG, LangChain/LlamaIndex
- YOLOv8, OpenCV, Object Detection
- Tableau, Power BI, SAS Viya, Git

INTERESTS

- LLM applications in finance
- End-to-end ML system design
- Game AI and reinforcement learning

ZHANG SHUFENG

Master of Science in Data Science | Machine Learning, Analytics and AI Systems

Data Science MSc candidate with hands-on experience in machine learning, reinforcement learning, financial operations, software development and respondent-recruitment automation. Comfortable translating data-driven ideas into working systems.

EDUCATION

Lingnan University

Master of Science in Data Science

2025.09 - 2026.08

Hong Kong, China

- Core courses: Database Management, Data Mining, Machine Learning, Data Visualization, Big Data Technology and Deep Learning.

Nanfang College Guangzhou

Bachelor of Data Science and Big Data Technology

2021.09 - 2025.06

Guangzhou, China

- GPA: 83.22 (Top 20%).
- Honor: Third Prize Scholarship of Nanfang College Guangzhou (NCU), Guangzhou.

WORK EXPERIENCE

Guangdong Yifucheng Pharmaceutical Co., Ltd.

Financial Assistant, Finance Department

2024.10 - 2024.12

Jiangmen, Guangdong, China

- Processed accounts payable and employee expense reimbursements.
- Organized and maintained financial documents and vouchers.
- Assisted with data entry and month-end reporting support.

Chinalin Securities

Assistant Wealth Manager

2024.08 - 2024.10

Jiangmen, Guangdong, China

- Researched market dynamics, prepared personalized investment recommendations and supported senior advisors in asset allocation planning.
- Analyzed client needs and tailored wealth strategies, including customized risk-management and wealth-appreciation solutions.

Guangzhou Yueqian Communication Technology

Company, Ltd.

2024.07 - 2024.08

Guangzhou, Guangdong, China

Software Design Department Intern

- Designed and built a real-time stock data query system in Java to support data monitoring and analysis.
- Optimized data management with Java Collections and implemented multithreading for seamless updates and stronger responsiveness.
- Applied the Spring framework for dependency injection and transaction management, improving modularity and data consistency.

PROJECT EXPERIENCE

Q-Learning Space Shooter: A Reinforcement Learning

Approach

2026.03 - 2026.04

- Built a Pygame space shooter with complex mechanics and a 20-dimensional state space.
- Implemented DQN with PyTorch, experience replay and a tuned reward function to train the agent.
- Achieved a top score of 10,070, demonstrating human-like tactics and validating reinforcement learning for game AI.

Adversarial Training Defense - MNIST Adversarial ML

2026.03 - 2026.04

- Implemented adversarial machine learning in PyTorch, covering FGSM and PGD attack methods plus Madry-style adversarial training defense.
- Validated adversarial sample generation and defense mechanisms on MNIST, improving model robustness under adversarial conditions.

Smart Respondent Recruitment System - 3.9x

Conversion Lift

2026.03 - 2026.04

- Built a smart respondent recruitment automation system based on the RONIN platform to automate recruitment workflows through data-driven strategy and automated messaging.
- Designed and implemented an automated recruitment funnel from application to participation.
- Optimized message templates through A/B testing and achieved a 3.9x conversion lift.
